Incoming President Donald Trump expected to aggressively ramp up energy drilling after taking office in January

After his return to the White House next year, President-elect Donald Trump is expected to take quick action to boost drilling and strengthen domestic production of oil and natural gas, which is already at record levels in the United States. According to reports, the incoming president and his transition team have been developing an energy agenda that includes immediately striking the Biden Administration's liquefied natural gas (LNG) export permitting pause and resuming permitting for new LNG exports, fulfilling a promise he made while on the campaign trail. Trump will also reportedly seek to expand drilling on federal lands and offshore, increase lease sales for oil and gas drilling and will work with cabinet members to expedite permit approvals for energy development and production.

During his first days in office, the new president also has plans to roll back many of President Biden's environmental policies that have targeted oil and gas producers and the energy industry. Trump oversaw the rollback of more than 100 environmental rules when he last was U.S. president and has made it clear his intentions to curtail overly burdensome government regulations and cut red tape when he returns to office. With his appointments for U.S. Environmental Protection Agency (EPA) administrator, energy secretary, interior secretary and other cabinet roles, President-elect Trump has directed new leaders of federal agencies to tackle "totally unnecessary, regulation," "enhance private sector investments across all sectors of the economy," and "oversee the path to U.S. energy dominance."

The president-elect also is anticipated to withdraw the United States, for a second time, from the Paris climate agreement, an international treaty setting long-term goals to guide all nations to substantially reduce global greenhouse gas emissions and address climate change. During his first term as president, Trump issued executive orders that pulled the United States out of the Paris Agreement, though the U.S. was reinstated to the climate agreement in 2021 after President Joe Biden took office.

President-elect Trump could also try to revive the Keystone XL pipeline once he takes office, though exact plans around restarting the massive pipeline project remain unclear. Otherwise, the Trump Administration is widely expected to prioritize energy infrastructure permitting and pipeline development, as was the case during the first Trump Administration.

Lastly, the incoming president has pledged to apply steep tariffs on imports of products from several of America's largest trading partners, including Canada, Mexico and China. Such moves would be impactful on energy and commodity sectors, and could alter long-established trade patterns and supply chains, which may inflate the cost of producing and buying energy. There does not appear to be exceptions in the planned tariffs by President-elect Trump, including for oil and gas. On behalf of the association's membership, TIPRO will closely monitor any developments on forthcoming tariffs that may present challenges to the U.S. energy industry and producers.

Midland senator files bill to establish task force focused on oilfield theft

In the state's next legislative session, Texas State Senator Kevin Sparks (R-Midland) wants the legislature to agree to form a new task force that would work to address oilfield theft, a rising problem for Texas oil and gas companies, particularly in the Permian Basin close to the senator's legislative district. To help tackle the issue, Senator Sparks recently filed [Senate Bill 494](#), new legislation, which if passed into law, would require the Railroad Commission of Texas to develop a theft of petroleum products task force.

Under the bill by Senator Sparks, the Railroad Commission would be directed to appoint a task force that studies and makes recommendations related to preventing the theft of petroleum products in the Lone Star State. The task force would have to include at least one representative from the oil and gas industry; at least one representative from an energy trade association; and representatives from local, state and federal law enforcement agencies.

TIPRO has been working with Texas state legislators, including Senator Sparks, and law enforcement on potential solutions to prevent and prosecute crimes associated with oilfield theft. Other concepts the association expects to see filed in the near future include legislative proposals funding a Department of Public Safety (DPS)– Oilfield Theft Prevention Unit, expanding the criminal scope of oil theft laws, increasing administrative penalties for saltwater disposal facilities and updating the Recycling Advisory Committee to address tubing theft, among others.

President's message

Dear TIPRO members,

This week, I received multiple media inquiries regarding a new report entitled “Tax Handouts to Wealthy LNG Developers Deprive Texas Communities and Schools of Needed Funds,” which looks at two primary tax abatement programs in Texas that have been granted to liquified natural gas (LNG) export projects. This provides yet another opportunity to examine the economic contributions provided by our industry and the importance of U.S. LNG export facilities and related infrastructure. TIPRO also provided some of our analysis to Subcommittee Chairman Pat Fallon (R-Texas) ahead of the [“Exposing the Truth on LNG: How the Administration Played Politics with America's Energy Future” hearing](#), which took place yesterday on Capitol Hill in Washington, D.C.

In less than a decade, the United States has transitioned from a net importer of natural gas into the [world's leading](#) exporter of this crucial energy resource. Driven by massive [production increases](#) in the Permian Basin, Texas has emerged as a hub for a thriving LNG industry, delivering substantial economic, infrastructural and strategic benefits to the state, the U.S. economy and the [rest of the world](#).

Texas has positioned itself as the epicenter of the U.S. LNG export industry becoming a vital engine of economic growth and infrastructural development for the state. Each year, the LNG industry supports thousands of local jobs and contributes billions in state tax revenue. The development of LNG export terminals and pipelines has also spurred widespread infrastructure growth in Texas. The [Port of Brownsville](#) and [Corpus Christi](#) – regions of the state needing economic revitalization – have seen unprecedented expansion in the last decade. This infrastructure growth creates ripple effects in industries ranging from transportation to engineering and manufacturing, further cementing Texas' position as a [leading](#) global energy supplier.

The benefits of Texas natural gas extend beyond economic impact, becoming indispensable in [meeting the surging electricity demand](#) during extreme weather events, such as winter storms and record-breaking heatwaves, ensuring a reliable and affordable energy supply for Texans. In addition to keeping the lights on in Texas and the world, natural gas also brings significant environmental benefits. Texas natural gas producers have reached [record emissions reductions](#) in the past decade, which means that as feedstock for power generation, natural gas offers [significantly lower emissions](#) compared to alternatives like coal.

The process of exporting LNG to countries across the globe, and the industry required to do so, has generated substantial economic benefits in the United States – on both a micro and macro scale. According to a recent National Association of Manufacturers (NAM) [study](#), based on data from 2023, U.S. LNG exports support 222,450 jobs and pay U.S. workers a combined \$23.2 billion in annual income. More broadly, the LNG industry contributes a whopping \$43.8 billion toward the U.S. GDP, and generates \$11 billion in tax and royalty revenues for local, state, and federal governments. Texas alone accounts for a significant portion of these figures. The report also finds that, under the right circumstances, the number of jobs, annual income, GDP contributions, and tax revenues generated by U.S. LNG exports could quadruple by 2044.

Texas LNG exports have become a [critical geopolitical tool](#) for the United States. When Russia invaded Ukraine in February of 2022, countries in Europe were faced with sky-high energy prices and needed to quickly transition away from Russian-supplied LNG. In response, the U.S. ramped up LNG production and export totals to our allies across the Atlantic. In a few short months, between January and April 2022, the U.S. increased our LNG exports by nearly 20 percent, and more than doubled the percentage of LNG exports bound for Europe compared to the year prior. As a result, European imports of Russian natural gas decreased by 40 percent between January and July 2022. Two years later, the European Union is now [currently looking](#) to replace its remaining Russian LNG imports with more affordable U.S. gas. In Asia, U.S. LNG is also [poised](#) to become critical to meeting the region's growing energy demand.

When looking more broadly at the Texas oil and natural gas industry, based on our definition and specifically focusing on coastal counties in our state, the positive impact for these communities is enormous. In this region, last year direct oil and natural gas employment exceeded 55,000 with a total diversity index of 50 percent, meaning our industry provides quality employment opportunities across a broad range of demographics. Once you incorporate direct, indirect, and induced multipliers, more than 178,000 jobs were supported by our industry last year in the region. To further illustrate the reverberating economic impact of our industry, in 2023 nearly \$100 billion dollars of U.S. goods and services were purchased by the oil and natural gas sector in Texas coastal counties, 30 percent of which occurred within the region. Out of 926 business sectors in these Texas counties, 880 sold good and services to the local oil and natural gas industry, including corporate, subsidiary, and regional managing offices (\$343,245,558), plumbing, heating, and air-conditioning contractors (\$133,378,391), full-service restaurants (\$20,136,027), hotels and motels (\$11,091,850), supermarkets and other grocery stores (\$4,254,928), clothing and clothing accessories retailers (\$2,845,362), general medical and surgical hospitals (\$1,986,339), convenience retailers (\$909,520), elementary and secondary schools (\$474,893), and colleges, universities, and professional schools (\$365,957), to name a few. To see the full list of business sectors in the Texas coastal region that benefit from the local oil and natural gas industry, [click here](#). Finally, the direct oil and natural gas industry Gross Regional Product (GRP), which is essentially GDP for a region of study, for Texas coastal counties exceeded \$60 billion last year.

The United States is witnessing the benefits of a strong LNG export industry unfold in real-time. Texas is at the heart of this burgeoning industry, and will continue to experience tremendous benefits, serving as the bedrock of U.S. economic growth and securing an advantageous position on the global stage for decades to come.

Industry executive Bryan Sheffield to speak at the next 'Leaders in Industry' luncheon

In January, Texas oilman Bryan Sheffield will provide insights at the monthly 'Leaders in Industry' luncheon, hosted by the Houston Producers Forum, Texas Independent Producers & Royalty Owners Association (TIPRO) and Independent Petroleum Association of America (IPAA). The luncheon is scheduled for Tuesday, January 21, at the Houston Petroleum Club.

Sheffield is the founder and managing partner of Formentera Partners, an energy-focused investment firm based in Austin, Texas, where he actively oversees sourcing, execution, fundraising, and all aspects of asset operations. Before Formentera, Sheffield founded Parsley Energy, an independent oil and gas company, where he served in various roles including CEO, chairman of the Board, and executive chairman. Parsley Energy was acquired by Pioneer Natural Resources in 2021. Early in his career, Sheffield worked as an investment banker in Sydney, Australia. He then went on to work as a commodities trader in Chicago. Credited with leading the second-most successful exploration and production IPO in history, Sheffield was recognized in *Forbes*' '40 under 40' and as *Austin Business Journal*'s CEO of the year.

Register [here](#) for the first 'Leaders in Industry' luncheon of the new year!

\$5.5 billion of oil & gas tax revenue was just transferred to the State Highway and Rainy Day Funds

Texas Comptroller Glenn Hegar announced the last week of November the transfer of about \$5.48 billion into the State Highway Fund (SHF) and the Economic Stabilization Fund (ESF; commonly known as the "Rainy Day Fund"). Each fund received approximately \$2.74 billion, or 50 percent of the total transfer, said the comptroller. This year marks the third largest deposit ever made into the ESF.

The combined \$5.48 billion severance tax transfers to the ESF and SHF are based on crude oil and natural gas production tax revenues in excess of 1987 collections. If either tax generates more revenue than the 1987 threshold, an amount equal to 75 percent of the excess is transferred.

"These transfers into the ESF and SHF show the Texas economy remains strong and well positioned for continued growth albeit at a much more moderate pace than what we have seen in recent years," described Hegar. "Although inflation has come down from the historic levels reached during the current administration, uncertainty remains in the global economy as consumers continue to grapple with elevated prices on everything from groceries to home and auto insurance, and geopolitical instability persists. That uncertainty is why lawmakers have safeguarded the Texas Rainy Day Fund and continued to invest in our transportation infrastructure. A healthy ESF balance provides a critical cushion against any future bumps in the road and gives the legislature increased flexibility as they convene to tackle the critical issues important to Texans."

In November 2014, voters approved a constitutional amendment allocating at least half of these severance taxes to the ESF, with the remainder going to the SHF for use on non-toll highway construction, maintenance and right-of-way acquisition. According to the Texas Constitution, the ESF and SHF transfers must occur within 90 days after the end of the fiscal year.

When Fiscal Year 2024 ended on August 31, the ESF balance was \$21.02 billion, according to the state comptroller. With the most recent transfers, the new ESF balance now totals \$23.96 billion, not accounting for currently outstanding spending authority of approximately \$486 million. The balance in the ESF will change as agencies spend down this remaining appropriation authority and investment earnings are realized.

TCEQ to host additional meeting on OOOOc rulemaking and State Plan for oil and gas facilities

The Texas Commission on Environmental Quality (TCEQ) will host a virtual stakeholder meeting on Monday, December 9th reviewing a proposed rulemaking and state plan for updating emission standards, monitoring, recordkeeping, testing, and reporting requirements for designated oil and natural gas facilities, in compliance with federal regulations developed by the U.S. Environmental Protection Agency (EPA). The proposed rule amendments by TCEQ include changes in emission guidelines and New Source Performance Standards issued by the EPA requiring updates to Chapter 113 and the Texas State Plan.

Throughout the month of November, the TCEQ held several stakeholder meetings, including one in Austin, Arlington and also Midland, to gather informal comments and input from the public on its proposal before a formal rulemaking begins. The state agency has added an additional virtual meeting in December to continue its outreach to stakeholders and the public on this issue.

In addition to its stakeholder meetings, the TCEQ also is accepting written stakeholder comments through the end of the year. Comments may be submitted using one of the following methods:

By mail: Program Supervisor, MC 205, Texas Register/Rule Development Team - Office of Legal Services
Texas Commission on Environmental Quality, P.O. Box 13087
Austin, Texas 78711-3087

Online: [TCEQ Public Comment system](#)

Senator Mike Lee poised to lead the U.S. Senate Energy and Natural Resources Committee

Republican Senator Mike Lee of Utah will take the helm to become chairman of the powerful U.S. Senate Energy and Natural Resources Committee in January. Following the GOP takeover of the U.S. Senate in the November election, legislators have been working on reshuffling key committee roles. Senator Lee will take over for the committee chairmanship from the current top Republican, Senator John Barrasso (R-Wyoming), who will become the upper chamber's No. 2 Republican next year. The committee's current Chairman Joe Manchin (I-West Virginia) is retiring. Senator Martin Heinrich (D-New Mexico) will take over as ranking member on the committee.

"Our nation stands at a pivotal moment," Senator Lee said in a statement after winning the new post on the committee. "It's time to harness our nation's abundant natural resources to achieve energy independence, stimulate economic growth and return stewardship of our beautiful lands to the American people who know them best."

White House official testifies on administration's LNG ban at congressional hearing in D.C.

Though President-elect Donald Trump is reportedly planning to swiftly reverse the Biden Administration's pause on new liquified natural gas (LNG) export permits when he takes over the Oval Office in January, members of Congress are still in the meantime raising concerns and continuing to investigate the Department of Energy's (DOE) ongoing ban blocking new permits for LNG exports to non-Free Trade Agreement (FTA) countries. This week, the U.S. House Oversight Subcommittee on Economic Growth, Energy Policy, and Regulatory Affairs hosted a hearing to receive more answers from White House officials on reasoning behind the policy limiting LNG exports from the United States and understand the latest timeline for the release of the final LNG study the DOE has worked on since January.

"LNG not only plays a critical role in American-made energy production; it plays a critical role on the global stage. The Biden-Harris Administration's decision to pause new LNG exports harms our energy production and security. The House Oversight and Accountability Committee has repeatedly called on the Biden-Harris Administration's DOE to provide full transparency about its decision to ban new LNG exports. However, Biden-Harris Administration officials may have obstructed the investigation and hid critical information from Congress and the American people," said Subcommittee Chairman Pat Fallon (TX-04). At Wednesday's hearing, Congressman Fallon said the LNG export ban has caused significant project delays, increased regulatory and legal costs, and created uncertainty for the workforces and communities supporting these large-scale, capital-intensive projects.

Brad Crabtree, assistant secretary of energy for Fossil Energy and Carbon Management at the DOE, testified at the congressional oversight hearing, telling members the administration's work on its LNG study is nearing completion and the study is expected to be released this calendar year for public comment. The government's LNG report will comprise a summary document and four technical appendices covering topics including impacts on gross domestic product, domestic prices, energy security, and communities, as well as a consequential greenhouse gas analysis, according to Crabtree. "The forthcoming update of our economic and environmental analyses is both robust and comprehensive. We have partnered with two of our national laboratories—the National Energy Technology Laboratory, NETL, and Pacific Northwest National Laboratory, PNNL—to support the underlying modeling work," said Crabtree. "The update to our program is a necessary step so that DOE can avoid reliance on stale data and analyses in our review of non-FTA applications under NGA section 3(a). Protecting the well-being of American communities and taking steps to guard against the volatility of energy prices for consumers and manufacturers is of the utmost importance to this administration. DOE is proud of its strong record of success defending NGA determinations that rely on well-supported and up-to-date analyses. The update ensures that DOE relies on the most up-to-date and robust data and analyses, to the benefit of U.S. consumers and the nation's economic competitiveness," said Crabtree.

Newly formed congressional caucus will work to downsize federal government

A new caucus in Congress has been formed called the Delivering Outstanding Government Efficiency (DOGE) caucus that will work alongside and support incoming President Donald Trump's Department of Government Efficiency (DOGE) to eliminate the rampant waste, fraud, and abuse in the federal government. U.S. Congressman Pete Sessions (TX-17) and Congressman Aaron Bean (FL-04) will serve as co-chairs of the new DOGE caucus in the U.S. House of Representatives.

Congressman Sessions said, "As chairman of the Subcommittee on Government Operations and the Federal Workforce, it has been my priority to identify and stop ongoing waste, fraud, and abuse in our government. According to a report from the GAO, there has been over \$2.7 trillion in fraud and improper payments since 2003. This is an absolutely unacceptable misuse of taxpayer dollars. Hardworking Americans deserve a government that works efficiently and effectively. I am looking forward to working with Congressman Bean and serving as co-chair of the DOGE Caucus to continue my commitment in rooting out inefficiency in our government."

A similar working caucus has also been created in the Senate to work to identify and eliminate areas of government waste, rein in reckless spending of federal agencies, and improve the lives of American families. U.S. Senator John Cornyn (R-TX) announced last week he has joined the Senate DOGE Caucus.

"The national debt has skyrocketed to more than \$36 trillion under Leader Schumer and the Biden Administration, and about two thirds of federal spending is on auto-pilot, which is neither sustainable nor acceptable," said Senator Cornyn. "Congress must responsibly budget, evaluate key priorities, and cut excess spending just like American families and small businesses, and I'm looking forward to working with the Trump Administration on this as a founding member of the DOGE Caucus."

U.S. crude oil production pushes upward to achieve new record high

An average of 13.4 million barrels per day (b/d) of crude oil was produced in the United States during August 2024, a new record according to data from the U.S. Energy Information Administration (EIA). More crude oil was produced in the United States during August 2024 than during December 2023, when the previous monthly record of 13.3 million b/d was set, said EIA experts.

In the first eight months of 2024, average monthly U.S. crude oil production only fell below 13.0 million b/d once, in January. For the full year of 2024, the EIA has forecasted U.S. crude oil production will average 13.2 million b/d – which would surpass the 2023 annual average of 12.9 million b/d. In 2025, the EIA forecasts U.S. crude oil production will average 13.5 million b/d.

The United States became the world's top crude oil producer in 2018, a position it has maintained each year since.

SIGN UP FOR TIPRO'S 79TH ANNUAL CONVENTION!

TIPRO's 79th Annual Convention will bring members of the association, industry executives and energy professionals to the state's capital city in February for thought-provoking discussions on the latest developments and policy considerations impacting Texas producers and royalty owners. The association's esteemed line-up of guest speakers will address a broad range of topics during the meeting, including challenges and opportunities facing the Texas oil and natural gas industry today.

Topics addressed at the convention include:

- Energy policy updates amid Texas' Legislative Session
- Important regulatory considerations for the Texas oil and natural gas industry
- Oil and gas market assessments and outlook
- Insights on industry trends, technological innovations and other best practices for oil and gas operations

The convention will start with a welcome reception on February 24, followed by a full day of speakers and chairman's dinner on February 25. Attendees will also have the opportunity to participate in meetings with elected officials and staff of the Texas House and Senate during the morning of February 26 as part of TIPRO's legislative call-up. This grassroots event is held in conjunction with the association's annual convention for those who wish to participate.

There will also be scheduled networking activities, before/after/in-between speaker sessions and presentations during the TIPRO convention.

For more details on TIPRO's convention in Austin or to register online, visit www.tipro.org!

CONVENTION SPONSOR LEVELS

GOLD SPONSOR **\$10,000**

- Four all-access badges to TIPRO's convention
- Premium placement and acknowledgement on all event materials and signage
- Complimentary full-page ad in the event program
- Complimentary half-page ad in the TIPRO newsletter
- Company recognition included in TIPRO's legislative call-up meeting packet

SILVER SPONSOR **\$7,500**

- Three all-access badges to TIPRO's convention
- Premium placement and acknowledgement on all event materials and signage
- Complimentary half-page ad in the event program
- Complimentary half-page ad in the TIPRO newsletter

BRONZE SPONSOR **\$5,000**

- Two all-access badges to TIPRO's convention
- Acknowledgement on all event materials and signage
- Complimentary half-page ad in the event program
- Complimentary half-page ad in the TIPRO newsletter

BLUE RIBBON SPONSOR **\$3,500**

- Two all-access badges to TIPRO's convention
- Acknowledgement on all event materials and signage
- Complimentary half-page ad in the event program
- Complimentary quarter-page ad in the TIPRO newsletter

RED RIBBON SPONSOR **\$2,500**

- One all-access badge to TIPRO's convention
- Acknowledgement on all event materials and signage
- Complimentary quarter-page ad in the event program
- Complimentary quarter-page ad in the TIPRO newsletter

WHITE RIBBON SPONSOR **\$1,500**

- One all-access badge to TIPRO's convention
- Acknowledgement on all event materials and signage
- Acknowledgement in the event program and TIPRO's newsletter

OTHER CONTRIBUTING SPONSORSHIPS

- Conference Totebag Sponsor - **\$3,000**
- Conference Lanyard Sponsor - **\$2,000**
- Conference Amenity Sponsor - **\$2,000**
- Conference Notebook Sponsor - **\$2,000**
- Conference Tumbler Sponsor - **\$2,000**
- Conference Wifi Sponsor - **\$1,500**
- Conference Charging Station Sponsor - **\$1,500**

Each sponsorship above will include one all-access badge to TIPRO's convention. Each sponsorship is exclusive to one participating sponsor.

*Exclusive to one participating sponsor.

Sponsorship Form

Thank you for your interest in sponsoring TIPRO's 79th Annual Convention in Austin. Not only does your sponsorship allow you to directly reach TIPRO's membership, your support of the association helps TIPRO host engaging and dynamic events with distinguished officials and industry leaders.

TIPRO CONVENTION SPONSOR OPTIONS

I would like to commit to the following sponsorship package (please check corresponding box):

- | | |
